KEYboard
Control Keyframes With Your Keyboard

Controlling key is animator's daily routine. KeyBoard provides a series of function for keys in After Effects. Those functions are small but can be used frequently, such as setting keyframe Ease, cloning keys, mirroring keys, shifting keys or randomizing keys. With KEYboard, animators can do things more quickly and would not be interrupted by those repetitive tasks.

Besides managing keys, KEYboard also provides custom expression and javascript shortcuts and extra help tools.

INSTALLATION

1.Drag script file to Scripts folder of your After Effects installation and make sure KEYboard is the first one in the stack order.

2.Then start After Effects. Run KEYboard from File>Scripts>01-Key-board.jsxbin to set custom shortcuts
