LOOPY

Welcome

Thank you for purchasing **Loopy**! This PDF will explain how to install the script, as well as where you can find further help.

Installation

To install Loopy, place the 'Loopy.jsxbin' file into the 'ScriptUI Panels' folder in your version of After Effects.

If you're using macOS, this can be found here:
Applications/Adobe After Effects/Scripts/ScriptUI Panels

If you're using Windows, this can be found here:
Program Files/Adobe/Adobe After Effects/Support Files/Scripts/ScriptUI Panels

Support

If the user guide doesn't answer your questions, or you have any feedback that you'd like to give, please leave a comment or open a support ticket at **aescripts.com/loopy**
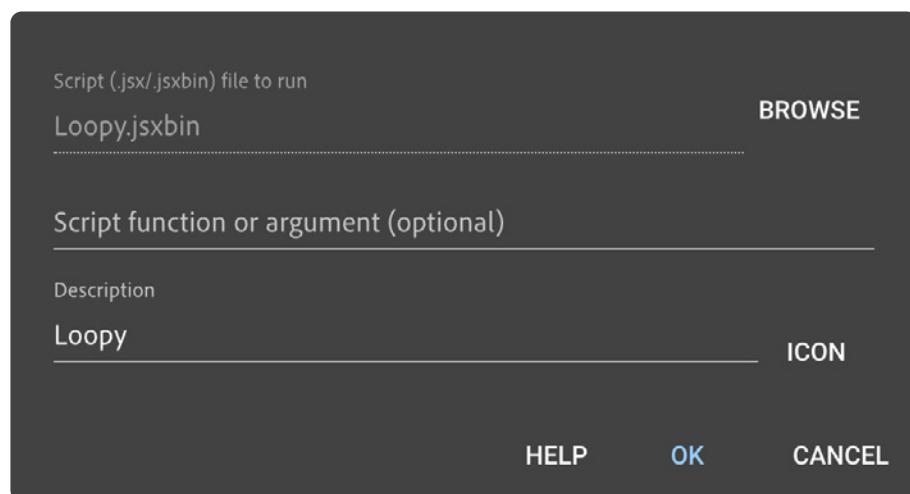

LOOPY

The After Effects tool to speed up applying different types of loops to layers and properties.

by Automotion – automotion.studio

KBar Setup

Loopy is configured for use with **KBar** – simply change the 'Script function or argument' value (see highlighted field below) to change the function of the KBar button.
There are provided icons for each of these functions.

If you are using KBar3, there is a .kbar file included, for easy import of the toolbar buttons.

Script (.jsx/.jsxbin) file to run

Loopy.jsxbin   BROWSE

Script function or argument (optional)
